

Technology Forum lightweight paper 20 May 2010

The challenge of printing lightweight paper.

Are others' limits where you just get started? Do your customers require products with paper below 75 gsm? Then this is the ideal event for you.

For some applications the substrate cannot be thin enough. An essential factor is optimal sheet travel from feeder to delivery.

We will show how to meet the challenge of printing lightweight paper on 20 May at our Technology Forum.

The technical solutions will be demonstrated on a ROLAND 700 HiPrint.

Agenda

- New running characteristics for lightweight paper in sheetfed offset
- Live demo on a ROLAND 700 HiPrint

Registration via E-Mail

The Technology Forum lightweight paper takes place 20 May 2010 from 11 a.m. to 2 p.m. at manroland Print Technology Center in Offenbach. The participation is free of charge. Travel and accommodation costs if applicable to be borne by the participant. Register to Technology Forum via E-Mail to productmarketing@manroland.com
