

MAINTENANCE

ProServ Oil Analysis

Optimize Oil Change Intervals & Minimize Costs

ProServ Oil Analysis is designed to assist in the proactive care and maintenance of the press and to control the life cycle costs of operation.

ProServ Oil Analysis is a proven aid in the evaluation of the condition of oil lubricated components in sheetfed presses and provides critical information on the serviceability of the oil itself. Oil Analysis is a valuable proactive maintenance tool that assists the customer in maximizing the interval between oil changes, reducing operating costs and downtime overall.

How this helps

ProServ Oil Analysis evaluates the condition of the oil to ensure it is meeting the manufacturer's specifications and is analyzed for impurities and metallic deposits. It is also designed to assist in the proactive care and maintenance of the press and to control the life cycle costs of operation.

Oil Analysis Includes:

Spectro-chemical Analysis

- Wear metals
- Contaminants
- Additives

Physical Analysis

- Viscosity
- Water Contamination

Customers are contacted immediately by telephone when an oil analysis detects a critical or abnormal condition. Each oil analysis is followed up with a printed report for your records.

Advantages

Maintenance

- Early detection of wear and possible damage
- Cost savings thru early detection of component wear
- Eliminate unnecessary maintenance and component overhauls
- Reduce parts failures and repairs
- Reduced maintenance time

Life Cycle Costs

- Cost savings by optimized oil change intervals
- Increased availability due to reduced downtime
- Increased component lifespan
- Reduction in lost revenue due to downtime
- Reduction in consumables spending
