

MAINTENANCE & SERVICE CONTRACTS

Vibration Analysis

Long-Term analysis to increase production reliability

Vibration analysis for preventive checks of failure-endangered press components.

With a vibration analysis, selected components are observed over a long period of time. A vibration analysis can identify at an early stage changes (damage and wear) that may lead to a breakdown. This enables these components to be replaced before this happens.

Within the scope of a service contract the frequency and duration of work will be agreed upon individually. ■■

Advantages

- Increased production reliability
- Reduction of downtimes
- Lower costs through prevention of breakdowns and selective preventive maintenance

Price

Fixed price per press or printing system; travel and other costs included in the service contract
